ABSTRACT

Currently, food ordering operation systems are used by many hotels and restaurant. In the online food ordering system provide for customers to get food and beverage easily. Customers can order foods before go to there and take their choices using this system. They can check prices of which they ordered and ingredients. People went to unknown place in country they can log in to the system and can order food they wish.

As a result of this, customers could query about restaurants, e.g. by using their district. They could search various meal dishes from the listed hotels and also adapt the ingredients. Customers could also query about different food items such as what types of pizza are available, what kind burgers the hotel could offer, what toppings are included to this, etc.
