ABSTRACT

In fast moving modern world everything is changed to provide a better life for humanity. New inventions make this as a reality. Providing medical facilities and the administration in the Health Services is also undergone into many changes. In Sri Lanka also there are improvements and changes .When we consider this changes with the developed countries we are still trailing behind. This lack of improvements Make many affects in the development of the country and Life format the people.

So we have to tackle these kinds of challenges successfully. So we want to build up our public services based on digitalized system. According to this purpose I am going to implement a Web based system to organize and implement the services of medical centers. And this system will include several things and advantages.

When we consider the present channeling format, there are lots of time waste and human values and Patients also facing many difficulties. So, when we provide the best services to them, the patients will get Goodwill about the medical centers. And this system will not include only the records of the patients. It will fulfill all basic needs of the particular medical center and also has some more factors to need their administration.
