## **Abstract**

Due to the inefficient and decentralized nature of information sharing and communication methods used for controlling the Management Information System, a number of issues such as high cost, unavailability of e-commerce website, requirement of many systems for handling various functions, unavailability of centralized database (cloud computing), foreign and different context and etc.

The project looks at solving these issues by proposing both a business as well as an IT solution. Therefore, this system provides solution to small business firm in Sri Lankan context and it is based on Cloud computing. A comprehensive industrial survey was carried out to gather further details on the subject matter thus the results of it were considered whilst proving or disproving the hypotheses. The most influential factors identified through the research were then used to design the business solution. These solutions strive to provide an all-round solution; both strategically and systematically were highly rated by the evaluators of the project.
