## ABSTRACT

This is a web based and android application based project. Sometimes it is difficult to find sellers who are involved in unique products. In this context, he can use this website to find a seller matching his search criteria. Also this is an opportunity for such sellers to obtain publicity. In the meantime, a sales person engaged in this area can look for a new opportunity by contacting the seller. There are no any systems for mutual business environment in Sri Lanka. In my system provide website and mobile application help for give solution for this problem for Sri Lankan business environment. This system considers about three of views like customers, sales managers and shop owners in business environment. And build good integration.

A website requires attractive design and proper arrangement of links and images, which enables a browser to easily interpret and access the properties of the site. Hence it provides the browser with adequate information and functionality about the organization, community, network etc.

Mobile application helps to sales managers for contact a published shop in order to sell his items. Also they can create a collection of details.

The web site has been developed using php, HTML, jquery, java script and MySQL for database connectivity. Mobile application follows with android and SQLite for database connectivity.

**Key words-** MySQL, php, HTML, android, SQLite
