ABSTRACT

Due to the globalization virtual markets have been rapidly developed. Due to this reason most business organization pays attention to sell products online. Because it's cost effective and they can promote their business through worldwide. Through the web they can address a wide area of customers. Currently in Sri Lanka there are no facilities which provide information about Restaurants via the mobile phone and Restaurant owners can update their feature through the website.

The project looks at solving these issues by proposing both a business as well as an IT solution. Restaurant Picker project helps customer to select the Restaurants through his or her phone. Not only that but also registered Restaurant owner can promote their business through the website. Restaurant owners can promote their restaurants by registering their restaurants in the web site and they can insert, edit, and delete menu details and promotions. Mobile users able to find all the registered restaurants in the web site and they will be able to find their menus promotions and location via the mobile. Though business organization (Restaurants) promote their facility through the website most people won't able to know about that because of their busy life style. In this situation if they can use their mobile phone to gain the information about Restaurants it's very useful and both customer and business organization.
